PERS – 2025 Parklet Checklist *Private Land*	Planning, Engineering & Regulatory Services
To be Submitted (continued)	SECTION 2

- Parklet Accessibility Design Conditions:
 - Current accessibility design standards prescribe a range of options as outlined by the Canadian Standards Association B651-18 (CSAB651-18) and the National Building Code of Canada, As such, parklet design must meet the conditions outlined.
 - If a ramp is necessary, the following conditions must be met:
 - 1:16 slope as recommended by the CSA B651-18. A minimum of 1:12 slope may be approved by the inspector.
 - 47 inches wide as recommended by the CSA B651-18. A minimum of 36 inches may be approved by the inspector.
 - Color contrasting, tactile indication at slope change.
 - Slip resistant surface.
 - 34-36 inch high, graspable handrails.
 - Design within the parklet shall:
 - It is recommended to Include some accessible seating options for persons using a wheeled mobility device with removable seating and a table height of 29-34 inches high, as is outlined by CSA B651-18 standards. Paths of travel leading to accessible seating options must be 62 inches wide as recommended by the CSA B651-18, to accommodate the use of wheelchairs, walkers, crutches, etc. A minimum of 36 inches wide may be approved by an inspector.
- [Electrical Permit](#) (required if any lighting/electricity is provided in the outdoor space)
