

AT HOME RESOURCES

Silly EGGHEAD Planters

Start your own Egg-Head garden this spring! You can even reuse your painted Easter Eggs.

Supplies:

Eggshells (With just the tops cut off)
Dryer Lint (or Soil)
Markers for drawing
Seeds
Water

Instructions:

1. Have an adult break off the top part of the egg.
2. Carefully rinse out the shell and let the shell dry for a couple of days.
3. Place your Egghead into an empty egg carton to stabilize.
4. Draw silly faces on the eggs with the permanent markers.
5. Go to the dryer and grab some dryer lint, place at the bottom of the egg. You can also use soil if you have some on hand.
6. Add seeds of your choosing. Maybe try some grass seed, chia seeds, clover or cress seeds. Wet the dryer lint until good and moist.
7. Add a little more lint over the top of the seed and wet.
8. Make sure to keep the plant moist but do not over-water. You can use an eye dropper to water the plant daily. Two eye droppers full is plenty of water.
9. Place your eggs in a sunny spot. After a few days some of the seeds will start sprouting. After about 5 days they will have a nice full head of hair! Ready to style!
