

Public notification of proposed telecommunication structure

Proposal: NLA003 – 100 Elizabeth Ave, rooftop antenna installation

Please note you are receiving this correspondence because you own property within a prescribed notification distance of a proposed telecommunication installation.

Eastlink is proposing a rooftop antenna installation to be located on an existing rooftop at 100 Elizabeth Ave, St. John's. The area is currently underserved, and this installation will provide increased cellular service to the residences, businesses, and emergency services of the surrounding area.

Installation details:

The proposal is for an existing rooftop at 100 Elizabeth Ave, St. John's. The proposed installation is made up of six (6) antenna, arranged in three sets of two. Due to sharing requirements and future expansion needs it is possible that this rooftop will have additional infrastructure installed on it in the future.

Colocation:

Few colocation opportunities exist in the area, the only nearby telecommunication installation is located on the rooftop of 69 Elizabeth Drive (Bell site J1150). This structure is too low to provide coverage adequate to fulfill Eastlink's coverage objective.

Transport Canada and Nav Canada:

This installation is exempt from requiring TC or Nav Canada evaluation.

Attestations:

- Eastlink attests that the radio antenna system described in this notification package is excluded from environmental assessment under the Impact Assessment Act.
- Eastlink attests that the radio antenna system described in this notification package will be constructed in compliance with the National Building Code of Canada and comply with good engineering practices including structural adequacy.
- Eastlink attests that the radio installation described in this notification package will be installed and operated on an ongoing basis to comply with Health Canada's Safety Code 6, as may be amended from time to time, for the protection of the public including any combined effects of nearby installations within the local radio environment.

Innovation, Science and Economic Development Canada is responsible for all radiocommunication undertakings within Canada. As part of their consultation process, tower proponents are required to follow local Land Use Authority tower siting guidelines if such guidelines have been adopted. If no such guidelines or policies have been adopted, then the proponent is required to follow the ISED Default Notification guidelines as outlined in CPC-2-0-03 — Radiocommunication and Broadcasting Antenna Systems.
